DETAILED ACTION

Election/Restrictions

- I. Claims 1-23, drawn to a method for producing a rotor comprising two regions each made of different alloys, classified in class 29, subclass 889.2.
- II. Claims 24-32, drawn to a rotor comprising two regions each made of different alloys and a three dimensional shaped transition zone , classified in class 415, subclass 216.1.

The inventions are distinct, each from the other because of the following reasons:

1. Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the rotor can be formed by welding together different rotor segments of different materials. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

2. During a telephone conversation with Gary M. Hartman, Reg. No. 33,898 on 01/31/05 a provisional election was made with traverse to prosecute the invention of Group I, claims 24-32. Affirmation of this election must be made by applicant in replying to this Office action. Claims 1-23 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

Examiner's Amendment

3. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Gary M. Hartman, Reg. No. 33,898 on 02/01/05.

The application has been amended as follows:

In the Claims:

Claims 1-23 have been canceled.

The above changes were made to facilitate allowance of the application.

Reasons for Allowance

1. The following is an examiner's statement of reasons for allowance:

The instant application is deemed to be directed to a non-obvious improvement over the invention patented in Pat. No. 5,524,019 to Takenouchi et al. The improvement are the transition zone has a three-dimensional shape about the centerline of the rotor forging and the axis of rotation of the rotor is more centrally located with respect to the transition zone than the centerline of the rotor forging.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Prior Art

The prior art made of record but not relied upon is considered pertinent to applicant's disclosure and consists of 1 patent.

Siga et al. (6,092,989) is cited to show a turbine rotor having regions each made of different metal alloys.
